Proposals and Reference

Proposal 1: Dividends of Surplus

We hereby propose to distribute the following year-end dividends for the 94th fiscal year based on a consolidated dividend payout ratio of approximately 30% set forth in “Policy for Profit Distribution to Shareholders.”

1. Type of property for dividends: Cash
2. Matters concerning allotment of dividend property to shareholders and the total amount thereof
The Company’s common shares: ¥38 per share
Total amount to be distributed: ¥1,575,470,956
3. Effective date for the dividends of surplus: June 27th, 2017

[Policy for Profit Distribution to Shareholders]

The Company believes the most important management task for the Company is to enhance its corporate value and constantly distribute profits to shareholders through a business model of providing World’s No. 1 products based on state-of-the-art technologies in the growing market.

The Company considers maintaining a core policy regarding the distribution of profits linked to the business performance of the Company and the Company aims to pay stable dividends targeting a consolidated dividend payout ratio of 30%. Also, considering the aim to provide stable and continuous dividend payments, the Company deems to maintain an annual dividend of ¥20 per share regardless of consolidated profits of the Company. However, it is at the discretion of the Board to review this basic policy if the Company experiences deficit in two consecutive years.

The Company’s normal operating procedure for dividends is to pay a dividend twice a year. The General Meeting of Shareholders determines the year-end dividend and the Company’s Board of Directors decides the interim dividend.

Internal reserves will be used effectively for the research and development and capital investment for state-of-the-art technologies, overseas development, sophistication of Information systems, new business development, and M&A investment. Also, since our product lines are greatly impacted by economic fluctuations, the Company considers it important to maintain and strengthen the soundness of our financial position and prepare for possible economic downturns.

The Company’s acquisition of its own outstanding stock is a flexible measure for the profit return that supplements its dividends from retained earnings. The Company will comprehensively analyze its cash flows and internal reserves before undertaking acquisition of its own stock.

- i) In the Exercise Price Adjustment Formula, “Number of shares already issued” shall be equal to the total number of the Company’s issued shares on the day if there is a record date and on the day one month before the applicable date in other cases, less the number of shares of treasury stock owned by the Company.

- 2) The Post-adjustment Exercise Price in the case where adjustment is made in accordance with Item (1) 2) above shall apply on or after the day following the payment date (if the payment term is set, the last day of such payment term) for the relevant share issuance or disposal (in the case where there is a record date, on or after the day following such record date).
 - (3) In addition to the cases described in (1) 1) and 2) above, in the event of circumstances in which the Exercise Price needs to be adjusted such as in cases where the Company conducts a gratis allotment of other class shares to common shareholders or a distribution of dividends to common shareholders who hold shares of any other company after the Allotment Date, the Company may adjust the Exercise Price within reasonable boundaries by taking into account conditions such as those for said allocation or dividends.
